

GLENN HØJMOSE

Glenn is a late 1968 edition.
He is the outcome of a working bricklayer family.

After becoming a Truck Mechanic in 1986, Glenn's urge to invent, took over. In 1995 he started at the School of Architecture in Aarhus, Denmark.

After finishing as an Architect in the Industrial Design Department, Glenn went out to conquer the world with his ideas. Unfortunately, all Glenn's ideas resulted in Industrial Design jobs and not products.

In 2004, Glenn decided to take one idea, and follow it though, by himself.
The Cavius Travel Alarm were born 3 years later. The long development time was mostly due to the smoke chamber.
Along with the Travel Alarm came the idea of creating a tiny smoke alarm, instead of the big ugly ones hanging around.
And in 2008 the world's smallest smokealarm was born.

During 2010 Glenn created Cavius Aps in Silkeborg which was acquired by Carrier in 2021.

Glenn has now set up his own workshop where creativity blooms.
