

MARIUS SORTEBERG

Was born in 1970 and had from very early age an interest in everything related to science, like blowing up things with firecrackers, reconstructing bicycles and at age 15 welding up a three wheeled motorbike of his own construction. Soon after cars had the main focus.

This led Marius to the car industry where he was educated as a body repairman, but ended up trying out most positions within the industry before reeducating at an age of 27. Cars and everything related to mechanical and electro controlled equipment has been with him since as a hobby.

Part of what is behind this drive has been problem-fixing, and if it's a problem it should also be a solution to fix it. If you think of it, a crashed car is usually a big problem, so that challenge was part of the reason for the choice of education.

After the shift in education and 25 years in the IT industry, Marius is considered one of the most knowledgeable experts in digital ID in the Nordics. With 5 years as responsible for the digital ID's of one of the largest corporations in the finance industry in Norway, he is now part of an international startup building a next generation identity solution for the customer base of large organisations. Also with this hat on his focus is problem solving.

Marius' contribution to the team behind the Battery box is both of practical character, like helping out on the design and 3D print the prototypes, but also to give inputs so the right problems are solved with the product itself and the partners providing the surrounding services.
