

## **OVE FRYDENBERG**

A late 1966 model, whose basic education is in electricity and automation. After a couple of years as an electrician, he moved to the fire brigade in 1992.

There he has worked full-time for 30 years, and is now in his 7th year as a fire inspector in the preventive department. In addition to inspecting special fire objects such as recycling and waste industry, he works with risk-exposed groups. With courses from the police college and the fire academy, Ove participates in a multidisciplinary collaboration group for fire investigation in the south-east police district.

With his background as an electrician, Ove has a natural interest in following the green shift, and especially the challenges in new energy carriers. His participation in both international and national forums also sparked him to organize conferences, and he has made several guides for both the fire department and the energy industry.

We wanted Ove on the team for his expertise and practical sense, skeptical questions and critical eye in the process of developing the Batterybox.

When he agreed to become a member of our adviserboard, he believes that the advertisement from the Kinderegg could be reused. He was convinced by the three good arguments: Home security, social security and the environment.
